### Opis produktu

The Mishimoto water hose temperature sensor adapter allows you to place the water temperature sensor directly within the radiator hose. By placing the sensor in the hose and thus directly in the path of the water to the radiator, you are ensuring the most accurate reading possible. Being able to accurately gauge the temperature of the water aids in preventing overheating. Each temperature sensor adapter is made of aluminum and fitted with a 1/8" NPT sensor bung.

- Overall Length: 2.67" / Housing Length: 1.18" / Inlet & Outlet: 28mm
- Made with solid aluminum and includes 1/8" NPT bung
- Allows placement of sensor directly in path of coolant for accurate readings
- Note: To determine the size needed, measure the inner diameter of the hose.
- Mishimoto Lifetime Warranty
