Opis produktu

This innovative product fits all MQB platforms as well as both left and right hand drive vehicles and is a direct replacement for OEM part code 5Q0129635L

Fitting this part increases the airflow into the turbo by replacing the restrictive plastic OEM turbo inlet pipe. When fitting this part, you will increase the available airflow and create an impressive sound by creating a larger, smoother transition between the turbo inlet hose and compressor housing inlet.

- Increased airflow.
- All aluminium construction.
- CNC machined couplers for a precision fit.
- No check engine lights
- Black hardwearing powdercoated finish.
- Compatible with LHD and RHD
- Up to **8 BHP and 16 ft/lbs** or torque improvement
- Made in Great Britain.

An all-aluminium construction that fits with standard inlet hose or aftermarket systems, featuring a precision mandrel bent CNC formed pipe along with a precision CNC high flow machined flange. The O-ring seal design between the turbo coupler and inner surface of the turbo inlet ensures no leaks and no debris can be drawn into the turbo internals.

Please note this hose does not fit the standard flexible plastic hose and only fits aftermarket silicone induction hoses, including the Forge Motorsport [induction hose](#).
