Blow Off Valve for VW, Audi, Seat & Skoda 1.5 TSI (up to 2022)

Cena brutto	1 777,19 zł
Cena netto	1 777,19 zł
Dostępność	Na zamówienie
Numer katalogowy	379176597

Opis produktu

If you have a 2022 onwards model, you can find the appropriate valve [here](#)

As the engine does not have a diverter valve fitted as standard, Forge have developed a twin piston dump valve that not only gives you an incredibly loud sound when lifting off the throttle, but also **increases the throttle response** during gear changes by **reducing turbo lag**. It has been designed to help the turbocharger maintain its rotational speed ready for when you accelerate, whilst also taking the strain away from the impeller. Without removing this stress from your turbo, it could cause premature failure. Especially on modified vehicles.

This valve kit allows the fitment of our fast response blow off valve preventing turbo surge and **prolonging the life of your engine's turbocharger**. The kit includes all of the necessary hardware and step by step installation instructions for any car enthusiast with appropriate garage tools to fit at home, in just a couple of hours!

As the engine does not have a diverter valve fitted as standard, Forge Motorsport have developed a twin piston dump valve that not only gives you an incredibly loud sound when lifting off the throttle but it also increases the throttle response during gear changes by reducing turbo lag, it is designed to help the turbocharger maintain its rotational speed ready for when you accelerate, as well as prolonging the life of your turbo.

Due to the exposed position of the OEM boost pipe and the nature of heat cycle, the plastic that the OEM pipe is made from can deteriorate over time, becoming brittle and susceptible to boost leaks. This kit totally replaces this plastic pipe from turbo to manifold with a silicone hose (available in a choice of colours!).

Highlights:

- CNC machined billet couplers and components
- CNC machined twin piston Forge valve
- Three hose options: red, blue, or black (Custom available but will incur a 50% non-refundable deposit and a lead time of 8-10 weeks)
- Forge valve will not bring on any check engine lights (EML)
- The hose has a quality inner lining of modified silicone known as 'Fluorosilicone'. This means that the hose will stay bright and vibrant, and will not deteriorate over time. Forge Motorsport lined hoses are suitable to be used with modern long-life coolants, Organic Acid Technology coolants (O.A.T.) and oil mist. The construction of the hose has been engineered to exceed that of the
