Carbon Fibre Intake Kit for EA888 GEN 3

Cena brutto	2 893,08 zł
Cena netto	2 893,08 zł
Dostępność	Na zamówienie
Numer katalogowy	379175742

Opis produktu

THIS PRODUCT HAS NOW BEEN DISCONTINUED AND WILL BE SUPERSEDED BY OUR CARBON FIBRE INTAKE, [FMINDK40](#)

After over a year in our R&D department finalising the design, fit, and finish, Forge are proud to present a carbon fibre intake for the **1.8 and 2.0 TSI EA888** engines. It combines a highly unique, desirable and attractive look with an ability to offer **real-world horsepower increases**. Although the VW/Audi group got their intake pretty good, we were able to force feed even more cold air into our intake by running it the full width of the slam panel, and exploiting the cold air ducts that VW/Audi put in from the factory, but don't use.

The genuine carbon fibre is finished in high gloss; this results in a true **premium product** for your car which far exceeds other intakes at the same price point, and embarrasses those priced even higher. It offers **greater sound from the engine**, particularly when on boost, and our product testers have reported a more responsive throttle too. The filter element itself is provided by [Pipercross](#), and is fully serviceable or replaceable if necessary. In our testing, it was the only filter type that was able to offer adequate filtration to the engine, whilst still being capable of flowing enough air to offer an increase in horsepower and torque.

The kit comes complete with everything you need for installation, which can be carried out in around 30 minutes, including a set of full colour [instructions](#).

We have now developed an [inlet hose](#) to support vehicles that use a MAF sensor, make sure to select the appropriate inlet hose options when purchasing. The MAF inlet hoses are shown below. The image on the left is what your stock engine bay should look like if you have a MAF sensor inlet, if you have the circled part on your vehicle then you will need to purchase the MAF hoses option on the inlet hose dropdown. Any queries on this be sure to [contact us](#) to confirm.

â This is a great intake, perfect for my Audi TT. Great sound and performances. Perfect service â

â Excellent intake kit, installed on my mk7 R the other day and build quality is good fits perfect and makes such a difference in sound, can hear the turbo spool a lot more â

Some VW Golf Mk7's have a secondary air intake pipe connected to the side of the stock airbox. If you have an aftermarket intake kit that does not cater for this, then simply fit our [secondary air](#)
