Opis produktu

The Mishimoto Ford Mustang EcoBoost Performance Aluminum Radiator is designed and engineered to reduce coolant temperatures substantially, and to protect your 2015 Mustang from overheating during aggressive driving or hot lapping sessions. It is the ideal upgrade to the stock 2015 EcoBoost Mustang radiator, and will outperform even the upgraded Ford performance package radiator. The Mishimoto Mustang EcoBoost radiator features a large three-row core, 100% brazed aluminum, and polished end tanks, enhancing the overall performance of your engine. The engineers at Mishimoto designed this EcoBoost radiator with a 72.5% increase in coolant capacity over the base-model radiator, and 53.3% increase in coolant capacity over the larger performance package radiator. This 2015 Mustang radiator also has a 22% increase in coolant surface area, and 50% increase in air surface area over the larger performance package radiator, making it an ideal upgrade to keep your EcoBoost running cool! This innovative 2015 Mustang radiator design features steel lower mounting brackets that are fully functional with the stock intercooler or the Mishimoto
