Kod producenta	USA-RAD-20-0285

Opis produktu

These kits are designed to replace the plastic coolant tank found at the front of the engine bay. These coolant tanks are compatible with the Ford Mustang (GT, EcoBoost, V6) The Radium Engineering coolant expansion tank is CNC machined from aluminum and consists of two halves that are bolted together. The low-profile design allows extra room in the engine bay for aftermarket forced induction or other modifications. The internal design features two chambers that are NOT isolated from each other. There are cross-over passages at the top and bottom. The Radium Engineering coolant header tank also has an internal swirl feature, which is to help aid in deaerating the system. The kits include all parts necessary for installation. No permanent vehicle modifications are required. Included -Billet Aluminum Coolant Tank -Anodized Aluminum Mounting Bracket -Stainless Steel Hardware -Adapter Fittings -Replacement Heater Hose -Overflow Hose, 7/32" *PRESSURE CAP SOLD SEPARATELY* Instruction PDF
