DAVIES CRAIG EWP80 - Elektryczna pompa wody

Cena brutto	1 430,00 zł
Cena netto	1 162,60 zł
Numer katalogowy	RTMG-901-0547

Opis produktu

Davies Craig electric water pumps are made of an anti-corrosive and lightweight material (glass-fiber reinforced nylon) with mechanical seals in carbon fiber for greater reliability. Such pumps significantly improve cooling, giving more power and better fuel economy. The biggest advantage of electric water pumps is that they run independently of the engine speed, always with the same efficiency. The pumps are universal and fit almost all vehicle brands. This EWP80 pump is suitable for use with motors with a capacity of max. up to 2.0L. Davies Craig pumps can be mounted as a standalone pump, however for full benefit it is recommended that it is used with a digital controller which gives full control of engine operating temperature. Benefits of installing the Davies Craig EWP: The coolant circulates independently of the engine speed and when the engine is stopped Increased engine power and torque Better engine temperature control Increased cooling capacity Increased engine life Mechanical water pump reduction Increasing the maximum engine speed Input and output diameter: 32mm or 45mm. Total weight: 900g Voltage: 12v Capacity: 80 liters per minute Working temperature: -40 ° C to 130 ° C
