### Opis produktu

With the release of the new 2016 Mazda Miata, the Mishimoto engineers are hard at work looking for ways to improve engine efficiency. They created this new direct-fit Miata oil catch can system to help protect the heart of your Miata from harmful blow-by.

Direct injection engines, like the one in the 2016 Miata, suffer from accelerated carbon build up due to the lack of port injection, which washes the valves with fuel during engine operation. The engineers saw a significant coating of oil build up while examining the intake manifold. The oil was coming from the PCV system, which contributed to carbon accumulation and a decrease in octane levels. Mishimoto's new Miata catch can system helps to prevent this blow-by from reaching the intake, resulting in a cleaner running engine.

Mishimoto's Mazda Miata oil catch can kit features Mishimoto's [2-port Compact Baffled Oil Catch Can](#) with a bronze filter and internal baffle to better separate the oil from the crankcase vapors. Two direct-fit silicone hoses and an application-specific bracket make for a quick and simple installation. Like all Mishimoto ND Miata parts, this catch can kit comes with the Mishimoto Lifetime Warranty!

Our catch cans are different from most air-oil-separator (AOS) systems on a few levels. First, our catch cans are not heated. This means that all of the blow-by is able to condense in the can, including low-octane oil vapors and contaminated fuel vapors. Most AOS systems also drain the blow-by back into the oil pan, while our catch cans trap the blow-by and keep it out of the engine permanently. If you've seen what we've seen in the bottom of our catch cans, you won't want that draining back into your oil either.

- Direct-fit for 2016+ Mazda Miata
- Single can mounts in line with PCV system
- Features integrated drain valve and hose for easy service
- Will not interfere with stock or aftermarket strut tower bars
- Mishimoto Lifetime Warranty
