Dekiel pokrywa z czujnikiem blow off BOV Turbosmart Power Port

Cena brutto	903,00 zł
Cena netto	734,15 zł
Numer katalogowy	TS-0207-3006

Opis produktu

In a world first, Turbosmart's Power Port Sensor Cap brings data logging capabilities to a blow-off valve using compact and contactless technology. The sensor cap can be used on any locking-collar style Power Port blow-off valve. The position sensor allows to see what the BOV is doing, and when, allowing for detailed analysis of not only BOV response and performance, but a deeper insight into the boosted system on a global level. With an analog output, it can send this data to a range of popular data loggers by simple using any analog input pin. (0-5V) The data from the Power Port position sensor can be used to maximise turbocharger performance. The Power Port Sensor Cap, just like our Wastegate Sensor Cap, is ideal for anyone who understands the benefits of data in getting the best possible performance from their turbocharger setup. Calibration and instructions are provided, please refer to these for further information.
