First, a low profile 8AN male banjo fitting is installed to the fuel hanger pump outlet. 8AN PTFE fuel hose runs to the LH side over the top of the fuel tank. It then turns downward and routes along the underside of the chassis through 2 billet fuel/brake line retainers. A new billet high flow fuel filter is mounted in the OEM location. Elements are either 10 micron stainless (-03) or 6 micron microglass (-05). From the fuel filter outlet, another 8AN PTFE fuel hose runs into the engine bay and towards the front of the fuel rail (not included). A low profile 8AN male banjo fitting is installed to the fuel rail. A direct mount fuel pressure regulator and gauge is mounted at the rear of the fuel rail. A new 6AN return hose with an SAE quick connect adapter is constructed to route fuel from the direct mount regulator to the rear. A low profile 6AN male banjo fitting is installed to the fuel hanger return port. New vacuum tubing is provided to replace the OEM hard lines.
