Opis produktu

OVERVIEW

This Radium Engineering fuel rail is a direct bolt-on with all twin cam Nissan KA24DE engines. Manufactured with a large 0.69" internal bore, the fuel rail can support all necessary engine power requirements. The Radium fuel rail converts the OEM side feed fuel injector setup to top feed allowing the use of high flow 14mm O-ring fuel injectors (not included).

The rail is CNC machined from solid 6061 aluminum and black anodized making it compatible with all fuel types including E85.

The OEM Nissan intake manifold is shown above. If planning to use with an Xcessive intake manifold, please note that the fuel rail may need to be shimmed to the proper height depending on fuel injectors used.

Included

20-0957 includes:

- Black Anodized Aluminum Fuel Rail
- Thermal Insulating Spacers (x2)
- Thermal Insulating Washers (x2)
- Black Anodized Aluminum Injector Seats (x4)
- Stainless Steel Mounting Bolts (x2)
