### Opis produktu

Whether you're bending an emergency replacement brake line or putting together all new fuel lines for your project car, having an efficient and easy-to-use tube bender can make all the difference. Mishimoto's 3-in-1 tube bending tool is all you'll need to properly bend 1/4", 5/16", and 3/8" tubing. This tool works perfectly with copper, brass, aluminum, and thin-walled steel tubing. The proven design of this tube bender allows it to produce perfectly smooth bends up to 180 degrees without distorting, scratching, or crimping the tube. The knurled handle ends provide additional grip, and etched angle/bend identifiers make this tool extremely easy to use. In addition, this tool features a durable cast aluminum construction and our signature Mishimoto Lifetime Warranty.
