GReddy FV2 Black Dump Valve - Universal

Cena brutto	1 106,95 zł
Cena netto	899,96 zł
Numer katalogowy	11501673

Opis produktu

GReddy FV2 Black Dump Valve
Made in Japan, genuine Greddy item
High quality and reliability
The fastest response time on the market
Adjustable trigger pressure (spring preload)
360° rotatable body for an easy installation
Universal, to suit any gasoline turbocharged engine
Made from forged aluminium
GReddy part number : 11501673
GReddy FV2 Black Dump Valve
Specifications
Introduced in 2021, this GReddy dump valve is a direct evolution of the previous FV generation. Still made of forged aluminum and based on a dual piston conception, this new version arrives with a revised design while ensuring 100% backward compatibility thanks to its perfectly identical flange and dimensions. A new manufacturing process ensures even more reliability, and brings two major innovations:
The opening pressure of the GReddy FV2 dump valve is now adjustable with a knob.
The body of the dump valve can be rotated 360° to facilitate its installation in narrow engine bays.
The new GReddy FV2 black blow off valve ensures both stable idling and an extremely quick opening and closing time, even at low boost pressures. These unique abilities guarantee the highest reliability for any type of use, all while optimizing the turbo spool (maintains the rotation speed during gear changes for an improved response time / anti-lag properties).
GReddy FV2 dump valve, universal kit for all petrol turbo engines, supplied with mounting hardware (vacuum hose, gasket, t-piece) ! For a quick and easy installation, we recommend using a GReddy universal dump valve flange.
Listen to this blow off valve !
