Opis produktu

GReddy "FV2" ZC33S Dump Valve
Made in Japan, genuine Greddy item
"Plug & Play" kit for Suzuki Swift Sport ZC33S
Engine code : K14C
High manufacturing quality
Fast response and top reliability
Specific body with non-adjustable preload and fixed valve
Type : damp vent & return
Made from forged aluminium
GReddy part number : 11591217
GReddy FV2 Blow Off Valve Kit for Suzuki Swift Sport ZC33S
Specifications Introduced in 2021, this GReddy dump valve is a direct evolution of the former GReddy FV generation. Still made of forged aluminum and based on a dual piston conception, this new version features a revised design while ensuring 100% backward compatibility thanks to its perfectly identical flange and dimensions. A new manufacturing process ensures even more reliability, and brings two major innovations: The body of the dump valve can be rotated 360° to facilitate its installation in narrow engine bays. The new GReddy FV2 blow off valve ensures both stable idling and an extremely quick opening and closing time, even at low boost pressures. These unique abilities guarantee the highest reliability for any type of use, all while optimizing the turbo spool (maintains the rotation speed during gear changes for an improved response time / anti-lag properties). This kit for Suzuki Swift Sport ZC33S was developed and approved by GReddy in Japan, and contains everything needed for a plug & play installation. It allows two types of installation: return or vent to atmosphere. Please note that the dump valve body is specific to the ZC33S kit and has a non-adjustable preload with a fixed valve.
