Opis produktu

Improved cooling and reliability !Baffled oil panFor Nissan 350Z (engine : VQ35HR)2 ports for oil returns + 1/8PT fitting for oil temperature sensorMade in Japan, high quality finishLarger oil capacity than stockOptimized oil coolingLimits oil surgeOil pressure is always stableIdeal for intensive use (track days, competitive use...) "Plug & play" installation, without modificationsGReddy part n° : 13525902Greddy High Capacity Oil Pan for VQ35HR SpecificationsThis GReddy oil sump for 350Z has two optional ports (bungs included), making it easy to install oil returns as part of a turbo upgrade, as well as a 1/8PT fitting for an oil temperature sensor.This large capacity baffled engine oil pan combines two advantages : better oil cooling and better engine reliability by limiting the risk of oil surge :Thanks to a larger capacity than the stock oil pan, this one allows the oil to "rest" longer before going into the lubrication circuit. Oil cooling is improved, its design helps to disperse heat.The larger capacity, combined with the baffle partitions, ensure that a small oil reserve is always available at the oil pump's point of suction. This way, even in intensive use with high centrifugal force, your oil will always be at a stable pressure.This high capacity oil pan goes in place of the stock oil pan. Made in Japan by GReddy, with a high quality finish and perfect fitment.
