Opis produktu

Improved cooling and reliability ! Baffled oil pan For Nissan Skyline GT-R R32, R33, R34 (engine code : RB26DETT) Made in Japan, high quality finish Increased oil capacity (+1.5L compared to OEM sump) Optimized oil cooling Limits oil surge Oil pressure is always stable Ideal for intensive use (track days, competitive use...) Greddy part no. : 13525900 Greddy High Capacity Baffled Oil Pan for Nissan Skyline Specifications This high capacity oil pan offers two advantages : better oil cooling and better engine protection, reducing the risk of oil surge : Thanks to a larger capacity than the stock oil pan, this one allows the oil to "rest" longer before going into the lubrication circuit. Oil cooling is improved, its design helps to disperse heat. The larger capacity, combined with the baffle partitions, ensure that a small oil reserve is always available at the oil pump's point of suction. This way, even in intensive use with high centrifugal force, your oil will always be at a stable pressure. Warning ! The installation of this large capacity oil sump requires cutting and welding of the original sump (see diagram). Made in Japan by Greddy, with a high quality finish and perfect fitment.
