Professional and discreet look
Express shipping !
GReddy Large Intake Snorkel for GT86 & BRZ Specifications
Entirely designed and made in Japan by the engineers at Trust / GReddy, this snorkel offers all the advantages of a direct intake kit without any flaws. This snorkel allows you to keep the existing air box while carefully routing air from the front grill thanks to the Venturi effect. The aspirated fresh air remains isolated from the heat of the engine bay, and prevents pressure dropping in the intake circuit, while improving torque and power by about 2 to 3% (indicated by the manufacturer). Comes with all necessary accessories for installation (bolts, brackets, stickers...), this snorkel fits perfectly, making installation simple, direct and entirely reversible without any modification. Made from high quality fibre-reinforced plastic (FRP), with an attractive gloss black finish, for both a professional and discreet look. Japanese perfection brought to you by DriftShop, official importer and distributor for Trust / Greddy & Pandem !
