GReddy Body Kit Specifications  
GReddy offers this wide body kit specially designed for the Nissan GT-R with restyling from late 2016. Made of reinforced fiberglass with gel-coat finish, it is composed of an aerodynamic front lip and front and rear over fenders, adding 75 mm on each side for an ultra-aggressive look. Initially developed for the GReddy 35RX Spec-D entered in D1GP, this ready to paint kit allows you to reinforce the muscular appearance of the R35 and to install wider rims and tires for a spectacular fitment. Fitting the kit requires modifying the vehicle's bumper and fenders and drilling the bodywork. Attention : this kit is not compatible with Nismo edition GT-Rs. Please note We take special care in the protection and packaging of these parts for transport. However, it is imperative to check the contents of the package and the condition of the goods delivered in the presence of the delivery person. If necessary, write clearly on the transport documents before signing. No recourse with the carrier or DriftShop will be possible if the condition was not indicated upon delivery.
