Induction Kit for R32 Mk5 Golf

Cena brutto	1 974,98 zł
Cena netto	1 974,98 zł
Dostępność	Na zamówienie
Numer katalogowy	379175092

Opis produktu

This induction kit is for the Mk5 Golf R32. The filter is a [PiperCross](#) high flow Foam cone filter housed in a carbon fiber composite enclosed canister that connects directly to the an intake pickup at the front of the vehicle with an application specific inlet scoop. (Replacement filters can be found [here](#)).

Everything is connected via high quality silicone couplers. The system creates a true ram air effect, and will only see airflow from outside the vehicle with absolutely no hot air from within the engine that could reduce power. We have dyno tested this kit, and have seen **gains as high as 10 peak wheel horsepower** improvement over the stock airbox and filter on Stage 2 tuned vehicles. Whilst Power gains may vary depending on your modifications and level of tune, this kit will offer a significant improvement over the original air box*

*Please note some models have a noise resonator connected to the air intake pipe that will have to be disconnected and left unused when installing the Forge Motorsport induction kit. This will however not detract from the performance of the induction kit

Please note - the Pipercross filter is excluded from the Forge lifetime warranty

Please watch [our video](#) on how to fit an air filter without damaging it.

DO NOT OVER TIGHTEN

When fitting the filter to its counterpart please ensure you do not over tighten the hose clamp connecting them. Doing so could result in the part being crushed, leading to fitment and/or performance issues. The recommended torque setting for this hose clamp is 2-2.4Nm
