Opis produktu

The ZRP steel crankshaft is manufactured from EN40B solid steel billet to take your VW 3.2L R32 build to the next level. EN40B is the toughest material, offering hardening capabilities surpassing standard 4340 billet steel.

This high-grade material allows an EN40B billet steel crankshaft engine to rev faster and more smoothly due to its unique harmonics.

The ZRP EN40B crankshaft for the VW R32 engine is manufactured and designed to achieve the highest level of performance in Drag Racing and Hill Climb races and take your build to the next level.

The crankshafts with V-configuration engines are sold as unbalanced, and we offer fully balanced services at an additional cost, but a full rotating assembly weight is required.
