Opis produktu

Enhance Your Grip Say goodbye to one-wheel spins with the RacingDiffs Progressive LSD Conversion set. Effortlessly transform your standard differential into a clutch-type 25% lock limited slip differential. Why Choose RacingDiffs? Superior Material Quality: Our plates are crafted from the highest quality tool steel, heat-treated, and nitrated for maximum wear resistance. The addition of friction discs between plates and spider gears eliminates the issue of metal shavings, a common problem with cheaper alternatives. Maximized Performance: The Progressive LSD conversion set features a design inspired by ZF plated LSD units with Ramp Angles. This ensures a low pre-load while maintaining progressive lock capability, providing an open diff feel during slow turns and torque transmission to both wheels under load. Complete Set: The kit includes all parts necessary for installation, ensuring no more one-wheel spins and improved cornering performance. Note: Due to continued product improvement, the product illustrated may vary slightly from the actual product.
