Mitsubishi GTO 3000GT Twin Turbo Adjustable Actuators

Cena brutto	1 977,39 zł
Cena netto	1 977,39 zł
Dostępność	Na zamówienie
Numer katalogowy	379172932

Opis produktu

These actuators are designed for the Mitsubishi GTO (3000GT) twin turbo engines (priced per pair). Manufactured from Billet aluminium, these Forge adjustable actuators are a two part assembly that will allow servicing and maintenance. It also allows for rod adjustment to suit the customers individual application. Laser cut stainless steel brackets ensure OEM like fitment.

This product is built with a predetermined actuator spring suitable for at, or slightly above factory boost levels. The actuator can be assembled with a stiffer spring upon request. Please contact us directly concerning this process It is designed and built with the intention of increasing the boost output of a turbocharged system. We cannot guarantee compatibility with all applications, nor the ability to increase the boost output beyond a level that is within the parameters set by the engine-management-system of the given vehicle at the time of installation, whether that system is factory or aftermarket.

Please Note:

The pressure figures listed in the drop down menu above are minimum regulated pressure figures. If you are unsure please dont hesitate to call us on 01452380999.

Diaphragm sealed internals are the default selection for this actuator product but customers now have the option of piston sealed internals. Unique to Forge Motorsport this innovation offers equal performance to the diaphragm type and low maintenance due to the hard wearing nature of piston sealed valve internals.

Forge Motorsport nor any of it's authorised distributors can assume any responsibility for any adverse effects resulting from the installation and tuning of this product onto a vehicle whose engine-management-system, whether factory or aftermarket, is not capable of allowing for the desired level of adjustment. While Forge Motorsport is happy to supply you with an actuator capable of holding boost beyond that of your factory unit we are in no way capable of knowing nor suggesting that your vehicle's engine or related systems are capable of supporting or surviving the stresses of such elevated boost pressure.

After requests for a very durable, fit and forget version of our actuators that would withstand the rigors of marine corrosion or simply would not tarnish, we have now added the option of ordering any of our piston design actuators with stainless steel bodies and external components/fixings. This option does incur a surcharge and will be shown when added to your basket.
