MMR Silicone Intake Hose for Mini F56 Cooper S JCW 2013+

Cena brutto	509,99 zł
Cena netto	414,63 zł
Numer katalogowy	MMR16-1401B

Opis produktu

The MMR Performance Silicone Induction Hose for the B48-powered F56 Mini Cooper S and JCW has been designed to smooth the airflow from intake into the turbo, enhancing induction noise and even improving engine bay aesthetics. A simple fitment, it replaces the entire restrictive rear factory plastic 'bellows' pipe between the airbox and the intake backpipe. By taking away the standard plastic pipe's restrictive and turbulent airflow path, the Silicone Induction Hose gives a worthwhile power gain. The large diameter smooth-flowing hose is constructed from high quality silicone. It has been carefully developed with reinforced silicone elements embedded in critical areas to offer great rigidity to prevent deformation under load or heat. But crucially, as the engine can move considerably under load, the MMR Hose allows just the right amount of compliance to allow for adequate engine movement without causing damage to the intake or backpipe. Supplied in a deep gloss black finish and easily DIY installed in minutes, the MMR intake hose also features a stepped inlet and outlet to ensure a constant bore with smooth transitions to promote maximum airflow. The MMR Induction Hose is fully compatible with the standard elbow and airbox, but really gives greatest gains when paired with most aftermarket configurations. Put simply, you'll be wasting much of the gains from a high-flow air intake without fitting this hose. Fitting is very straightforward. The kit is installed in around 10 minutes using just hand tools. And easily returned to standard, should you ever wish.
