Opis produktu

The Forge Motorsport high flow intake hose for the MQB platform 2.0 engines, eliminates the highly restrictive plastic inlet pipe, and replaces it with our smooth bore multi-ply silicone hose which increases air flow, improving efficiency and performance. This equates to **increases of up to 10hp** which is a remarkable gain for an easy to fit bolt on modification.

□ **Excellent quality product & easy to fit** □

The high flow male alloy coupler is a bayonet type, rotated to the locked position before fixing in place by positioning the hose on the alloy coupler and tightening the hose clamps at both ends of the hose, anchoring the alloy coupler in position to complete the installation.

The Forge silicone hose in this kit has been designed to include an expensive inner liner of modified silicone known as Fluorosilicone. This means the hoses are suitable to be used with either modern long-life coolants, Organic Acid Technology coolants (O.A.T.) but more importantly for this application, air containing oil mist. The construction of the hoses has been engineered to exceed that of the OEM fitments, and will enhance any engine bay both technically and aesthetically. The use of a Fluorosilicone liner ensures that Forge silicone hoses are the clear market leader.

As with all Forge products, this hose comes with a lifetime warranty*
