Opis produktu

The Nuke Performance CFC Unit is able to be mounted to any type of fuel tank/fuel cell with this aluminum 6x10" 24-bolt pattern flange. The Nuke Performance aluminum flange uses the well known 24-bolt 6x10" pattern and is made for either welding to an aluminum fuel cell or to be fitted with countersunk bolts to be held in place. Made of lightweight, high-quality aluminum and is delivered unoxidized to make it possible to be welded to an aluminum fuel cell, if wanted. Thread size : 1/4-28 UNF x 3/4 This is a good solution for those who want to use/manufacture a custom fuel cell to their own specifications. Together with the Viton gasket that is provided with the CFC Unit, it makes a perfect seal, safe for all types of fuels. Delivered without bolts or gasket. Both bolts and gasket are included with the Nuke Performance CFC Unit (150-05-201). Quantity : 1pc
