Odyssey Competition Battery Extreme Racing 30 PHCA

Cena brutto	1 208,99 zł
Cena netto	982,92 zł
Numer katalogowy	ODY-EXTREME-30

Opis produktu

ODYSSEY Extreme Racing 30 battery This battery intended for a use in competition allows a saving of place and weight. Indeed, it contains more energy for the same volume. Solid construction thanks to the reinforced welds. The battery allows a start even with only 20% of the capacity. Its residual capacity is greater and the mass efficiency is higher, at least 30%. Storage without use for up to 2 years. In order for your battery to last a long time, it is imperative to keep it close to full charge, i.e. around 12.8 V. In order to ensure a correct charge, it is imperative to use a specific charger such as C-Tek which ensures a 100% charge (even 108% on certain models). A conventional charger will charge your Odyssey battery up to 80%. Tightening torque of the lugs: 3.9Nm Operating temperatures : -40°C to +60°C ODDYSSEY Extreme Racing 15 Starting power (5 secondes) 950 Dimensions (mm) Available current at -18° (30 seconds: up to 7.2v) 400 - Length 250 Rated capacity (Available amperage / 20 hours) 34 - Width 97 Available amperage / 10 hours 32 - Height 156 Capacity reserve (minutes)* 60 Weight (Kg) 9.1 Short-circuit current (Amp) 1700 Internal resistance 7.1 *Number of minutes during which the battery can deliver 25A at 25° up to a stop voltage of 10.5V The GT2i Team's advice: never use a battery with a voltage lower than 11.50V! The non-observance of these instructions will lead to a non-application of the guarantee. Data sheet Supplier Part Number ODS-AGM30E / PC950
