Oil Catch Can Kit Large RTMG Performance for 2.0 TFSI Purple

Cena brutto	1 485,00 zł
Cena netto	1 207,32 zł
Numer katalogowy	RTMG-901-0169

Opis produktu

One common problem of the TFSI engines is the carbon build-up on the intake valves. Due to the direct injection fueling system, where fuel is sprayed directly into the combustion chamber, the intake valves are not cleaned by fuel, therefore carbon deposits, a product of oil fumes of the stock PCV system, build-up on the valves. The RTMG Oil Catch Can kit can reduce the carbon build up on the intake valves up to 60%. The catch can also prevents oil pooling into the intercooler and intercooler hoses. Our smart three-stage filtering system takes care of the lighter vapors, while it also features a unique direct path to the bottom of the catch can for the heavy oil vapors, resulting in cleaning up to 99% of the returned fumes/vapors. Specifics: CNC Billet Oil Catch Can Monoblock Three Stage Baffling System Oil Level check with a dipstick Drain-in-seconds system with drain valve Serviceable three-piece design 16 mm Barb Fittings Reduces Carbon Build Up Small Dimensions & Capacity : 120x80mm - 300ml Large Dimensions & Capacity 160 x 80mm - 400ml Fits 2.0 TFSI Engines with code: AXX, BPJ, BPY, BUL, BWA, BWE, BUL, BYD, BWJ, BHZ, CDL
