Opis produktu

RTMG Performance after a lot of time in development offers the most comprehensive solution for the 1.8 / 2.0 TSI PCV. The Billet PCV Adapter ("Africa" Plate) is a racing semi play product that upgrades the factory PCV System which is plastic and fails commonly and causes unstable idle, check engine light, power loss, boost leak, and high fuel consumption. These can easily be plumbed to our baffled catch can collect the oil mist that is emitted, this will help a lot to decrease the carbon build up on the intake valves. This specific PCV is designed for racing use, and the crankcase vapors do not return to the stock turbo after the catch can. After passing through the catch can, the vapors can either be vented to the atmosphere or routed into a larger intake for a big turbo setup. The adapter/plate is manufactured from 6082 Aircraft Grade Aluminum in our in-house CNC machines. Fits all EA888 Engines: BZB, CDA, CJE, CAW, CCT, CCZ OEM PCV Part Number: 06H103495AC, 06H103495A, 06H103495E NOTE: Does not fit in the BYT engine.
