RacingLine Adjustable Rear Droplinks for MQB MQBE

Cena brutto	987,17 zł
Cena netto	802,58 zł
Numer katalogowy	VWR520000

Opis produktu

The RacingLine Rear Sway Bar Adjustable Drop Links replace the soft factory rubber bushings and weak plastic bodies in the factory link with these beautifully engineered adjustable aluminium billet replacements. The RacingLine Rear Sway Bar Adjustable Drop Links are beautifully engineered adjustable aluminium billet replacements to replace the soft factory rubber bushings and weak plastic bodies of the originals. Designed with one aim in mind: to help achieve optimum suspension performance and geometric accuracy, increasing the effectiveness of the rear anti-roll bar. Replacing your weak plastic OEM links with RacingLine's beautiful rigid billet aluminium Rear Adjustable Droplinks greatly reduces flex and allows a sharp, uncompromised transfer of suspension movement through to the sway bar. As well as the rigidity of the link itself, extra stiffness and precision comes from replacing the flex-prone stock plastic ball joint with a motorsport-spec ball joints. An especially effective upgrade on older, higher mileage cars. Fully adjustable by +/- 5mm to zero the pre-load on the anti-sway bar geometry. RacingLine's unique design means that adjustment can be carried out at both ends whilst the droplinks are in-situ on the car, making neutral positioning much easier without having to jack the car up and remove the links each time you want to make an adjustment. These links are direct replacement and can be used with either factory or aftermarket rear anti-sway bars, and can be easily returned to stock at any time.
