RacingLine Air Suspension Height Adjustable Lowering Links for Audi C7

Cena brutto	581,13 zł
Cena netto	472,46 zł
Numer katalogowy	VWR436000

Opis produktu

Lowering your Audi C7-platform with factory air-suspension couldn't be easier with the RacingLine Height Adjustable Lowering Links. RacingLine's Adjustable Lowering Links allow you to precisely set the exact ride height you want on your air-suspension Audi C7 platform car. They are engineered to seamlessly integrate with your factory air suspension system's ride height control. The result? A more aggressive dynamic look and a lower centre of gravity, enhancing vehicle dynamics and aesthetics without compromising comfort or ride quality. RacingLine's Adjustable Lowering Links bodies are constructed from Billet CNC-machined 6061-T6 Aluminium. They come with rubber boots/seals over the ball joints to far outlast the OEM parts, and ensure that the assembly grease remains in place in these joints whatever the weather & road conditions for long-term maintenance-free operation. Because RacingLine's design uses left and right-hand stainless steel threaded adjusters in each link, you can set your perfect ride height in situ on the vehicle without repeated removal/refit between adjustments. Just a turn of the link body adjusts each corner of the car one at a time. With a wide range of adjustment, the RacingLine Lowering Links simply replace the fixed-length plastic original links to allow a maximum vehicle lowering of up to 50mm / 2" front and rear. Fitment of the links is fully compatible with factory air suspension system, with no faults, coding or reprogramming required. Simple, quick fitment in minutes that's fully reversible.
