Opis produktu

Cool, sharp and positive changes are guaranteed from RacingLine's replacement DSG blades. These are complete billet aluminium blades, not cheap & nasty stick-on alternatives, completely replacing the standard paddles with RacingLine's high-tech titanium finish blades. Look great, feel great with precision shifting. It's all about the attention to detail. And what is more important than the controls of your car that you see and touch every single time you drive? RacingLine's DSG Paddle Replacements are exquisite CNC-machined billet aluminium blades, beautiful to look at and cool to the touch. Finished in a beautiful cool titanium coloured finish. By extending the size of the blades above and below the steering wheel spokes, it makes pulling that next gear a pleasure in tight turns when your hands are busy with the steering. Each blade starts life as a solid billet of aluminium. It's then meticulously machined with the latest CNC 5-axis technology. The +/- symbols are delicately cut out of the top of each blade. Finally, each paddle is hand polished, then gloss-anodised to stay beautiful for shift after shift, year after year.
