RacingLine R600 Cold Air Intake System - with Trifoam® Filter with SAI

Numer katalogowy

VWR12G7R600USA

Opis produktu

The RacingLine R600 is simply the most sophisticated induction system for for US-market MQB Golf 7 GTI & Audi A3 8V with 2.0 TSI EA888.3 engines that use the Secondary Air Injection (SAI) system. Hand built in the UK to OEM standards of materials, workmanship and detailing. But more importantly, the giant Trifoam® filter doubles the standard surface area to give unrivalled airflow for 600hp and beyond. Looking for the most sophisticated cold-air intake available for your Golf 7 GTI or EA888.3 2.0 TSI (SAI models)? The R600 intake is RacingLine's best selling system for this platform. Little wonder, as it combines OEM-standard design and quality with very significant power gains on uprated cars. RacingLine follows OEM-standards of design, quality, materials and construction, all hand-made in the UK. Fits like a factory part; lasts like a factory part. Airflow is no accident. Fully developed with F1-standard CFD programmes, it's no wonder so many high-power MQB cars choose the R600. The giant airbox and filter surface area is key to this, with airflow capabilities to support power outputs of up to 600hp without restriction. Twin CFD-optimised front intakes extending across the front of the car help achieve lower intake temperatures and worthwhile power gains. The enormous airbox volume houses the giant domed filter, complete with thoughtful details like connection to the original factory drain tube, and an SAI connection included. The giant airbox itself is UK-moulded in factory specification PU Polyurethane. PU gives excellent heat-insulation properties, keeping airbox temps lower as well as great durability in all conditions. Every factory mounting point is retained for that perfect fit. The giant domed filter units are hand-made in the UK. RacingLine offer you a choice of two alternative filter units, to suit different owner's needs. Both filter units are double the surface area of the factory filter - rated right up to 600hp and beyond. It's your choice. Whichever filter you choose, both RacingLine's unique Trifoam® filter and new Pleated Cotton units are hand-made in the UK for the perfect filtration and minimum restriction. This R600 has the Trifoam® filter unit • Faster, for longer • The highest airflow of all filter types, for the best possible power for more of the time. • As a high performance part, regular maintenance is essential to keep it at its very best.
