RacingLine R600 EVO Matte Carbon Cold Air Intake System Trifoam Filter for MQB MQBE 2.0 TSI EA888.3 EA888.4

Cena brutto	3 383,42 zł
Cena netto	2 750,75 zł
Numer katalogowy	VWR1210R600EM

Opis produktu

The RacingLine R600 Trifoam® with stunning Matte Carbon Fibre lid is simply the most sophisticated induction system for MQB & MQB Evo models with 2.0 TSI Gen.3 and Gen.4 engines. Hand built in the UK to OEM standards of materials, workmanship and detailing plus a stunning appearance. But more importantly, the giant Trifoam® filter doubles the standard surface area to give unrivalled airflow for 600hp and beyond. Looking for the most sophisticated cold-air intake available for your MQB or MQB Evo platform 2.0/1.8 TSI? The R600 EVO intake is RacingLine's best-selling system. Little wonder, as it combines OEM-standard design, quality and materials with very significant power gains on uprated cars. Fits like a factory part; lasts like a factory part – and all hand-made in the UK. The quality of the stunning matte carbon weave and finish of the lid is second to none (a high gloss carbon finish is also available). Airflow is no accident. Fully developed with F1-standard CFD programmes, it's no wonder so many high-power MQB cars choose the R600 intake. The giant airbox and filter surface area is key to this, with airflow capabilities to support power outputs of up to 600hp without restriction. Twin CFD-optimised front intakes extending across the front of the car help achieve lower intake temperatures and worthwhile power gains. The enormous airbox volume houses the giant domed filter, complete with thoughtful details like connection to the original factory drain tube included. The base of the giant airbox itself is UK-moulded in factory specification PU Polyurethane. PU gives excellent heat-insulation properties, keeping airbox temps lower as well as great durability in all conditions. Every factory mounting point is retained for that perfect fit. The giant domed Trifoam® filter unit is hand-made in the UK and over double the surface area of the factory filter. With a sophisticated triple-layered foam construction it gives the perfect filtration and minimum restriction. Note that RacingLine offer you a choice of two alternative filter units: this unique Trifoam® filter or a Pleated Cotton unit, to suit different owner's needs. This R600 has the Trifoam® filter unit: • Faster, for longer • The highest airflow of all filter types, for the best possible power for more of the time. • As a high performance part, regular maintenance is essential to keep it at its very best.
