Opis produktu

Combine RacingLine's dampers and springs to replace your whole factory set up with this Sport Suspension Upgrade Kit. Add handling dynamics and stability whilst lowering your ride height. Give your car a whole new lease of life with the RacingLine Sport Suspension upgrade. RacingLine have struck a ride & handling balance that matches the very best thoroughbred German performance cars - tight, perfectly controlled yet unmistakably sporty. When it comes to a matched set of Performance Sport Dampers and Sport Springs at an affordable price, this kit solves compromise between performance and comfort for keen drivers of MQB Platform FWD models such as Golf 7 GTI, Leon III Cupra. This kit combines the RacingLine Sport Damper kit with their carefully matched VWR Sport Spring set - combining two front and two rear Tri-Valve dampers with a set of 4 VWR Sport Springs specific to your car type. The kit will lower your car by around 15-25mm dependant on model, and provide a taught, controlled ride and handling balance. Extensive development from RacingLine's vast race set-up experience on the MQB platform ensures superior road-holding and a positive transformation in handling characteristics, all achieved without compromising comfort. Ride quality is just how a good hot-hatch should be. A little stiffer than factory, sure, but never crash or uncomfortable. All of which guarantees greater stability, control - and therefore driving pleasure. And isn't that what it's all about?
