RacingLine Stage 3+ Carbon Brake Kit 355mm 6 Pot / MQB & MQB 'evo' / RED

Numer katalogowy

VWR651002-RED

Opis produktu

Welcome to a global first: RacingLine's Stage 3+ Carbon Ceramic 355mm brake kit for the MQB platform. Not only is each disc close to half the weight of the factory disc, the kit is packed with motorsport-inspired features. Astonishing stopping performance, again and again and again. With calipers in stunning Bright Red finish. The RacingLine Stage 3+ Carbon Ceramic brake kit introduces CCM Carbon Ceramic braking technology to the MQB platform, a global first. Not only is each disc close to half the weight of the small factory disc, the kit is packed with motorsport-inspired features. Astonishing stopping performance, again and again and again. The kit features a stunning Bright Red finish to the calipers plus 355mm rotors, requiring a minimum of 18" wheels for clearance. RacingLine's 355mm rotor construction interweaves discontinuous carbon fibre to form a 3D multi-directional matrix. Which adds up to great weight savings, performance and durability versus traditional steel brakes. Most importantly, even with the size of these CCM discs, they weigh in at nearly half the mass of the (much smaller) factory steel ones. That's a big difference to unsprung weight. With over triple the heat capacity of conventional brakes, the repeatability of the stopping power is exceptional. It's braking unlike any metal rotor kit can deliver. Despite this performance capability, our Stage 3+ Carbon Kit is still perfect for daily usage, with good pedal response from cold. Each stiff, lightweight Forged Monoblock caliper starts life as a one-piece ultra-strong forged billet, exquisitely finished with a complex CNC machining procedure. RacingLine's advanced 5-axis CNC manufacturing techniques to give this kit more in common with top-level motorsport components than typical aftermarket parts. The result is a combination of ultimate track performance with lightness, stiffness and beautiful attention to detail. The result is a 6-piston caliper that is both stiffer and lighter than any other, combined with exceptional cooling characteristics and stunning detailing. The strength of this construction allows for thin-profile calipers which as well as providing extreme stiffness and light weight, aids in the all-important wheel clearance packaging. As RacingLine's kit is engineered exclusively for VWG cars (rather than the generic calipers that others offer), they've invested significant development time to define piston sizes perfectly to match to VWG's master cylinders and servos for beautiful progressive pedal response. Despite the size of these calipers, they weigh in significantly under the mass of the factory ones. The caliper, pads and bracket assembly together weigh 11.7lb (5.3kg) vs 18.9lb (8.6kg) for the stock Golf 7R / S3 equivalent. CCM-specific brake pads are included with the kit. RacingLine have thoughtfully specified a generic pad size for this kit, meaning a wide choice of alternative CCM pad brands & compounds are available if you have your personal favorite, or you're planning hard track use. This Stage 3+ Brake Kit comes with everything you need for installation: CCM rotors, calipers, mounting brackets, fast road pads, braided steel lines. Plus the option of RacingLine's Hub Adaptors for extra wheel clearance on OEM wheels. Simply bolt on & drive for a true supercar look and feel in the braking department.
