RacingLine Turbo Muffler Delete / MQB / 1.8 & 2.0 TSI EA888.3

Numer katalogowy

VWR16G7TDEL

Opis produktu

A valuable part of your 2.0 or 1.8 TSI MQB car's smooth breathing - banish the disruptive airflow of the stock part with RacingLine's precisely-machined single-piece Turbo Muffler Delete. And, as a side benefit, you'll get to hear your turbo working at last! RacingLine's Turbo Muffler Delete is a sleek single billet design which replaces the restrictive, power-robbing compressor outlet with a smooth, turbulence free air path exiting the turbo. The standard part is located on the outlet of the turbo compressor and is simply designed to reduce engine bay acoustics. Whilst it subdues the harmonic noises generated by the turbo, it also adds in disruptive turbulence to the airflow right where you don't want it. By replacing the standard part with our maximum diameter Turbo Muffler Delete with its smoothed internal bore for optimum airflow, you'll replace this unwanted restriction with a smooth CFD-developed uninterrupted air path. The result: noticeably better boost response giving a little more power and throttle reaction, all the while being able to actually hear your turbo working. CNC constructed from single-piece billet T6-6061 aircraft grade aluminum, the Turbo Muffler Delete is hand polished then anodized in gloss midnight black to look good, and stay looking good.
