Opis produktu

The radiator cap is an essential part of an upgraded cooling system. Radium caps are engineered to safely improve cooling efficiency by managing the boiling temperature. A higher radiator pressure effectively raises the coolant boiling point, providing an extra safety margin and preventing air pocket cavitation at the water pump. PRESSURE Available with 3 different pressure relief springs: 1. 1.1Bar (16.0psi) 2. 1.3Bar (18.9psi) 3. 1.5Bar (21.8psi) TYPE Radium radiator caps are designed for mini size (32mm ID) radiator necks only. Available in 2 common styles (Type-A and Type-B). COMPATIBILITY Below are popular vehicles with their respective radiator cap style used from the factory. NOTE: there are many vehicles not listed below.
