Kod producenta	RTMG-901-0898

Opis produktu

Aluminum supercharger pulley for Mercedes 1.8 Kompresor M271, 30% lighter compared to steel. Designed to increase the pressure up to 0.4 bar, our pulley offers an increase in power up to 20 hp with a significant torque gain throughout the whole rev range. Combine this with our ECU remapping to get +40hp, compared to stock. Unlike other pressure boosting methods, the RTMG Mercedes M271 pulley is designed to not exceed the limits of the stock supercharger, resulting in maximum reliability. No damage or extra wear to the supercharger or other components like water pump- alternator-bearings etc. 100% made of Aluminum alloy in modern CNC machines and standardization in ISO. Our design allows to install the pulley without damaging the shaft of the supercharger through the double clamping taper. No special skills are required for installation, and it's possible to fit without having to remove the supercharger from the engine. This product is made in Greece, and is manufactured and exported worldwide since 2007, by RTMG Performance!
