Opis produktu

Upgrade your EA888 engine with our Billet Crankshaft Oil Seal Housing, designed to outperform the factory unit in every way. Unlike the OEM housing, which is made from thin stamped steel and plastic, our version is precision-machined from high-quality billet aluminum for superior strength and durability. Key features: Enhanced Rigidity – The billet aluminum construction eliminates flex and distortion, ensuring a perfect seal. Integrated Spring Mechanism – Provides consistent pressure for improved sealing performance. Premium Silicone Compound – Our advanced silicone blend offers significantly greater resistance to heat, oil, and wear compared to the factory seal. This is the ultimate solution for preventing leaks and ensuring long-term reliability in high-performance or daily-driven applications.
