RTMG Performance Quad Water Methanol Injection System Upgrade Kit No 2 125ml

Cena brutto	1 682,98 zł
Cena netto	1 368,28 zł
Numer katalogowy	RTMG-901-0935

Opis produktu

Introducing our Quad Water Methanol Injection System Upgrade Kit, designed to elevate the performance and efficiency of your vehicle to new heights. The kit includes :

- 4 x 90° Injectors: Precision-engineered for optimal fuel delivery, these injectors ensure a consistent and reliable flow of water methanol mixture into your engine's intake manifold. With their 90° design, they seamlessly integrate into your existing setup, providing maximum efficiency without compromising on space.
- 1 x Splitter: The splitter serves as the central hub for distributing the water methanol mixture to each injector, ensuring equal distribution and consistent performance across all cylinders. Crafted with durability in mind, the splitter guarantees long-lasting functionality even under the most demanding driving conditions.
- 1 x 1 Meter Tube: Engineered to exacting standards, the one-meter tube serves as the conduit for transporting the water methanol mixture from the splitter to the injectors. Its high-quality construction ensures efficient flow and minimal restriction, allowing your engine to receive the optimal amount of fluid for enhanced performance.

With the Quad Water Methanol Injection System Upgrade Kit, you can experience a noticeable increase in horsepower, torque, and overall engine efficiency on high boost setups with WMI system. Whether you're looking to boost your vehicle's performance on the track or simply improve its everyday drivability, this kit delivers unparalleled results.
