RTMG Performance R8 Coil Adapter for TU5 NFU and NFX Silver

Cena brutto	484,99 zł
Cena netto	394,30 zł
Numer katalogowy	RTMG-901-0527

Opis produktu

The R8 coil adapter by RTMG Performance offers the solution for the common ignition related issues, such as misfiring, caused by the stock coil packs. With this billet coil adapter, you can install the R8/RS6 coil packs that are taller than the stock units and thus need an adapter for proper fitting. The NGK R8 Coils are tested extensively on our dragster projects and in thousands of VW AG engines, without any ignition related issues, resolving the misfire problem even in the most demanding setups. This kit it is recommended for the majority of high performance applications. As those are high quality OEM parts, longevity and reliability are ensured. The coil pack adapter comes complete with spacers and bolts. Combine this with 4 x NGK R8 U5014 Coils. Suitable for TU5 NFU & NFX engines. In case you use the plastic NFU cylinder head cover, you may need to cut the rubber extensions from the middle coil to rotate it because of the head breather system. Dual Fitment if you want to place the coils from the opposite. Color: Silver
