Opis produktu

This is direct replacement for the intake hose and turbo inlet elbow on the 1.5 TSI (EA211 Evo) engines found in vehicles across the VAG range of vehicles. What does it do? The replacement pipe & turbo adapter allow for increased airflow and removes the factory noise resonators unlocking some additional turbocharger intake noise. For further performance upgrades, you can also install our Proram panel filter (Search PPF-1787) or our upcoming open cone intake kit!
