Opis produktu

Forge are proud to release these pair of inlet hoses for the Audi RS6/RS7 C8. With maximum flow in mind, the factory ribbed hoses can impair flow characteristics in the engines' turbos along with the potential to collapse from extreme vacuum that can be experienced on tuned and re-chipped engines.

With the OEM hoses also being made from a ridged plastic, they may degrade and split over a prolonged period of time. Our engineers have removed the ribs to aid with flow along with slightly increasing capacity, covered by our limited lifetime warranty; using only the best materials available, the Forge inlet hoses will long outlast the OEM counterpart and along with improving aesthetics, you can be sure these hoses will not let you down.

This set of hoses was developed in conjunction with friends of Forge, and our authorised distributor in Sweden, [Stertman](#).

- The Forge silicone hoses in this kit have been designed to include an expensive inner liner of modified silicone known as Fluorosilicone.
- This means the hoses are suitable to be used with either modern long-life coolants, Organic Acid Technology coolants (O.A.T.) or air containing oil mist.
- The construction of the hoses has been engineered to exceed that of the OEM fitments, and will enhance any engine bay both technically and aesthetically
- The use of a Fluorosilicone liner ensures that Forge silicone hoses are the clear market leader.
- Lifetime warranty*
