Opis produktu

This set of three silicone intake hoses have been designed for the Renault Clio III R.S to replace the OEM rubber hoses which we have now seen start to fail. This is due to the construction of the original hoses; they have a shelf life and start to break down and split over many heat cycles. Rubber will naturally start to weaken and perish as it gets older too, so with this consideration, we have developed a product which will combat all of these issues to future proof the Clio's intake system.

Constructed from reinforced high quality 4 ply silicone, these hoses offer **increased rigidity to prevent deformation** due to engine movement or heat cycles. Not only a functional purchase but also a product which **improves the look of the Clio engine bay**, helped by the three colour options in the drop down menu above.

This kit is an straightforward install and takes 30-40 minutes to complete.

- Our Silicone Intake Hoses feature an inner liner of modified silicone known as Fluorosilicone, making them compatible with modern long-life coolants, Organic Acid Technology coolants (O.A.T.), and air containing oil mist. You can trust that these hoses are engineered to withstand the demands of your vehicle.
- Manufactured to exceed OEM fitments, our hoses not only provide superior performance but also enhance the technical and aesthetic aspects of your engine bay.
- Choose Forge silicone hoses and experience the market-leading quality backed by a lifetime warranty*. Say goodbye to worrying about hose failures and enjoy peace of mind with our durable and reliable product.
