### Opis produktu

These twin braces for the Fiat Grande Punto brace the front subframe to significantly reduce any twisting that can occur when driving hard. Twisting of this subframe leads to changes in the suspension geometry, just when you dont need it.

They have been fitted to the Alfa Romeo Mito, Punto 1.4 Tjet, 1.4 Multiair (Punto Evo) and 1.9 Mjet without issue, although they should fit any of the current Grande Punto range.

Our high quality braces are machined from stainless steel to give strength and durability.

#### **Details:**

- The material used is Stainless steel 304 grade, the size is 1" x 3/8 "
