Suzuki Swift Sport Hybrid 1.4 BoosterJet Dump Valve

Cena brutto	1 449,25 zł
Cena netto	1 449,25 zł
Dostępność	Na zamówienie
Numer katalogowy	379177521
Kod producenta	FMDV47
Kod EAN	5056721240978

Opis produktu

- Billet construction from aerospace grade aluminium
- **No fault codes and no check engine lights**
- Full instructions and all parts necessary for installation included
- Made in the UK
- Lifetime warranty

This part replaces OEM 228M1916

Forge Motorsport is proud to present the latest version of our very popular solenoid driven valve for the Suzuki Swift 1.4 hybrid (**engine code K14D**). This valve is a full replacement atmospheric blow-off valve (i.e. noisy) that integrates seamlessly with the OEM electronics and results in no detriment in performance, and **absolutely NO fault codes or check engine lights**.

Our alternative is a fully engineered solution offering significantly improved reliability and rapid discharge of unused air to help improve throttle response. This new valve has a very short overall installed height, which enables fitment of this atmospheric valve into the tight space between the turbo and the inlet hose from the air filter.

Our valve is piston based, with no diaphragm to fail, and of all aluminium construction, it replaces the original unit with a pressure/vacuum operated piston valve that still also retains the desirable OEM ECU control over valve actuation. The [spring](#)

[is interchangeable](#) for different levels of boost, and the solenoid is plug and play with the wiring harness which is included - as with all Forge products, this valve is guaranteed for life!

This is not to be confused with [FMDV21](#) which is for the non-hybrid variants (**engine code K14C**). Not sure which valve will fit your vehicle? [Contact us](#)
