Transmission Cooler for the Nissan GT R35 2011 Models

Cena brutto	15 119,60 zł
Cena netto	15 119,60 zł
Dostępność	Na zamówienie
Numer katalogowy	379175246
Kod producenta	FMTCR352
Kod EAN	5056721234755

Opis produktu

As previously, when we developed our highly acclaimed kit for the pre 2011 models , we teamed up with one of the world leaders when it comes to oil cooling, Mocal, and together we have again produced a comprehensive kit that relies on both companies expertise and delivers excellent results.

The cooler itself is a massive Mocal unit, fully ducted into the spare duct on the front bumper which improves the coolers efficiency. It's fed by braided lines with aluminium hose ends. The pump is Mocal's own, delivering an amazing 5 litres of transmission oil every 30 seconds to the cooler – enough to completely change the oil in the transmission every minute!

The transmission cooler is thermostatically controlled so only comes on when the transmission oil reaches 100 deg C (212 deg F), and turns off again at 95 deg C (203 deg F). This allows the transmission to reach a temperature that burns off any water based contaminants in the oil (e.g. condensation) before the cooler cuts in. During independent track testing the cooler brought the temperatures down to the point the cooler turned off, i.e. below 95 C (203 F)

This is a COMPLETE kit – all nuts/bolts/brackets are included, together with a genuine Nissan sump gasket, and a bespoke wiring harness with all the connections pre-made. A CD is included that provides a full colour installation guide around 40 pages long. This cooler adds 2 litres of oil to the system so please take that into account when you are purchasing the oil for this installation.
