Opis produktu

Lightweight 310s Stainless Steel Investment Cast Turbine Housings. These housings have been CFD designed to optimize aerodynamics and performance, but also weight. The design of Turbocharger turbine housings is such that we've taken advantage of a more advanced manufacturing process to create the most lightweight housings possible while ensuring thermal stability and impact strength for the installation's life. Each housing is optimised for AR specification at the tongue and across the housing. TurboSMART genuine spares and accessories are produced in order to ensure the longest possible service life for your favourite TurboSMART gear. These spares and accessories are not an afterthought, they are the components TurboSMART use in the hand assembly of your product, simply made available as a product you can use yourself to update, service or rebuild your TurboSMART product. Features 310s Stainless Steel Investment Cast Construction CFD Driven Design for optimal aerodynamics V-Band and Various T3 and T4 Inlet Options Notes: Suitable for all TurboSMART TS-1 and TS-2 Turbochargers featuring the 80mm Turbine Exducer Notes: Does not suit Reverse Rotation Models
